

ORCID iDs

ORCID is a unique, persistent identifier for your research. An ORCID id connects your research, shares data about your research record for funding, publications, data repositories, and other research workflows, and accurately identifies you when other researchers have similar names.

Any researcher can create an ORCID id for free. It consists of a unique 16 digit identifier, along with a shareable profile that has automatic links to your research.

To register for an ORCID id, go to orcid.org and click on Sign in/Register in the top right of the main page. Then click on Register Now to create an account. Complete the registration form. The form is basic and quick to fill in. It asks for your name and contact information and your employment or institutional affiliation.

Once you have a profile you will want to add information to it. Sign in and click on your name at the top of the page.

Click on the Edit icon above your name to add additional names or name variants.

You can also add information to your biography.

In the Activities area you can add details of your institution(s), education, professional activities, grants and funding. Finally, you can add your research output. Click Add to see options for adding. These include automatic links to services like CrossRef, adding items using DOI, importing a BibTex file, or adding manually.

In your account settings, you can decide who sees your information under Visibility. You can also find ways to share your information including embed code to include it on your web site, or a QR code.

Once you are finished you will have an ORCID id number and can use it when asked or prompted.

Your ORCID id can be shared with funding agencies or publishers on request, saving you time completing and updating forms. You can also link to your ORCID page to direct people to your research.

Remember to update your ORCID profile as needed to ensure your research record is up to date.
